Infect. Immun. 60:5259-526(1992).
-!- CATALYTIC ACTIVITY: Urea + H(2)0 = CO(2) + 2 NH(3).
-!- COPACTOR: Binds 2 nickel ions per subunit (By similarity).
-!- SUBUNIT: Consists of two subunits (alpha and beta).
-!- PTM: Lys-219 is carbamylated. The carbamoyl group provides the ligands for the two nickel ions (By similarity).
-!- SIMILARITY: Belongs to the urease family.
-!- SIMILARITY: Belongs to the beta subunit is what is known in
                          of Helicobacter felis urease

-!- CATALYTIC ACTIVITY: Urea + H(2)O = CO(2) + 2 NH(3).

-!- COFACTOR: Binds 2 nickel ions per subunit (By similarity).

-!- SUBUNIT: (Alpha, beta, gamma) (3) (By similarity).

-!- PTM: Lys-220 is carbamylated. The carbamoyl group provides the ligands for the two nickel ions (By similarity).

-!- SIMILARITY: Belongs to the urease family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   DB 1; Length 569;

Novel Helicobacter felis urease X and Y subunit polypeptides, useful in the diagnosis of Helicobacter felis infections and in the preparation of

The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis is Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an urease Y subunit polypeptide of the invention.

The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis is Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an ureaseXX subunit of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               540

The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis. Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis. Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an ureaseXX subunit of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a novel Helicobacter felis urease X and Y subunit polypeptides and immunogenic fragments. The polypeptides are used in the manufacture of vaccines against Helicobacter felis infections and in diagnostic tests to detect antibodies against Helicobacter felis in Helicobacter felis is difficult to grow so it is more convenient to use the expression products of the genes encoding the urease X and Y subunits in the manufacture of vaccines. The present sequence represents an ureaseXX subunit of the invention.

Novel isolated nucleic acid molecule having urease gene cluster, and

```
The invention relates to an isolated nucleic acid molecule conferring on Helicobacter bizzozeronii an ability to produce urease, where the nucleic acid molecule is a urease gene cluster comprising at least one urease estructural gene and at least one urease accessory gene. The nucleic acid molecule is chosen from ureA, ureB, ureE, ureG, ureH and ureI. The invention also relates to an isolated protein encoded by the nucleic acid, a vaccine for preventing onset of disease in mammals infected by H. bizzozeronii comprising a nucleic acid and a carrier, and an isolated cartibody or its binding portion raised against the nucleic acid. The moleic acids proteins and antibodies are useful for vaccinating mammals capainst onset of disease caused by infection of H. bizzozeronii, which involves administering the sequences. The sequences are useful for detecting H. bizzozeronii in a sample of tissue or body fluids which involves providing a nucleic acid as an antigen, providing an uncleotide sequence as a probe in a nucleic acid or hybridisation assay, contacting the sample with the antigen or the probe, and detecting any reaction which indicates that H. bizzozeronii is present in the sample. This sequence represents the H. bizzozeronii ureB
conferring on Helicobacter bizzozeronii ability to produce urease, useful as vaccine for preventing disease in mammals infected by H.bizzozeronii.

Vectors, e.g. pORV314 (see also AAT4351), carrying the gene locus can be used to transform host cells for the large-scale prodn. of recombinant, enzymatically inactive, multimeric urease. The urease complex induces a mucosal immune response that can treat or prevent Helicobacter, esp. H. pylori, gastroduodenal infection. (Updated on 16-OCT-2003 to standardise OS field)

                         This sequence represents a Helicobacter pylori GHPO protein of the invention. The polypeptides can be used for preventing or treating Helicobacter infections, and gastroduodenal diseases associated with these infections, including acute, chronic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. They can also be used for the production of antibodies. The products can also be used for

the inventor fracter to an interest acts completely any one of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid
encoding a polypeptide whose expression is inhibited by the antisense
concleic acid; (2) a host cell containing the vector; (3) an isolated
concleic acid; (4) an antibody capable of specifically binding
contisense nucleic acid; (4) an antibody capable of specifically binding
contisense nucleic acid; (4) an antibody capable of specifically binding
contiseration; (5) producing the polypeptide; (6) inhibiting callular
contiseration; (7) identifying a compound that influences the activity of
the gene product or that has an activity against a biological pathway
contiseration; (7) identifying a compound that influences the activity of
the gene product or that has an activity against a biological pathway
contiseration; (7) identifying a compound that inhibits proliferation of an
corganism acts; (9) manufacturing an antibiotic; (10) profiling a
corganism acts; (9) manufacturing an antibiotic; (10) profiling a
corganism acts; (9) manufacturing an antibiotic; (10) profiling a
corganism acts; (9) manufacturing an antibiotic; (10) profiling a
corganism; or (11) adentifying the target of a compound that inhibits the
corpound; or an organism. The antisense nucleic acids are useful for
identifying proteins or screening for homologous nucleic acids required

```

The invention relates to an isolated nucleic acid molecule encoding hyperimmune serum reactive antigen or its fragment. The composition

```
ö
or antibody) is useful for manufacturing a medicament or pharmaceutical preparation (e.g. a vaccine) for treating or preventing H. pylori infections. The antigen or its fragment may also be used for isolating, purifying and/or identifying an interaction pattner of the hyperimmune serum reactive antigen or fragment; for generating a peptide binding to the hyperimmune serum reactive antigen or fragment, where the peptide is selected from anticalines; for manufacturing a functional nucleic acid selected from aptamers and spiegelmers; or for manufacturing a functional ribonucleic acid selected from ribozymes, antisense nucleic acids and spiral antigenic protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             181
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    241

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                        The invention relates to a protein having a specific region of primary structure of the beta-subunit Helicobacter pylori urease, appearing as Structure of the beta-subunit Helicobacter pylori urease, appearing as ADS09176 (amino acids 201-318 of the beta subunit) or a sequence which generates antibodies that suppresses proliferation of H. pylori and which suppresses urease activity of H. pylori by an immune reaction. Also included are a gene which encodes the urease fragment, a transformed cell transformed by introducing the urease fragment, a transformed cell transformed by introducing the gene, an antibody which recognises the urease fragment and transforming a plant by introducing the gene into the plant and making it express. The urease fragment is useful for producing blood serum containing antibodies which suppresses proliferation of H. pylori and which suppresses urease activity of H. pylori which involves immunising a living organism (e.g. a human, cow or hen) with the urease immunishing a living organism (e.g. a human, cow or hen) with the urease transferic and peptic ulcers, gastritis and may be implicated in stomach cancer. The urease enzyme is thought to be responsible for maintaining the bacterium in the acid conditions of the stomach. The present sequence is the H. pylori urease beta subunit from which the
                                                                                                                                                                                                  Protein having specific region of beta-subunit urease of Helicobacter pylori, which generates antibodies that suppress proliferation and urease activity of bacteria, useful for preventing Helicobacter pylori
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              122

The sequence of the Helicobacter felis urease ureB gene product (given in AAR67371) was compared to ureases of Helicobacter pylori (AAR67378), Proteus mirabilis (AAR67379) and jack bean urease (AAR67380) and regions of homology were identified. (Updated on 25-MAR-2003 to correct PN

Helicobacter antigen, and parenterally administering to the mammal a Helicobacter antigen. Also included is an attenuated Salmonella vector comprishing a nucleic acid molecule encoding a Helicobacter antigen. The Helicobacter antigen is a urease, a urease subunit, or its immunogenic fragment (encoded by the ureA and ureB genes). The mammal is at risk of having but does not have Helicobacter infection or has a Helicobacter infection. The attenuated Salmonella vector further comprises an htrA or nirB promoter. The vector and be used in inducing an immune response against Helicobacter in a mammal. The vector can be used to treat Helicobacter induced gastroducdenal diseases, including acute, chronic or atrophic gastric sarcinoma. Attenuated Salmonella vector pHUR3 was constructed expressing UreA and UreB and including an E. Coli AmpR gene. The present sequence represents a protein or peptide encoded by the pHUR3 or plasmid. NOTE: pHUR3 is represented by both ABB55112 and ABB5512 and ABB5512 and ABB5512 and ABB5513, yet Figure 4 shows all the peptides being expressed by the one sequence, therefore all encoded peptides are cross-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         483
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          541

Immunogenic composition against Helicobacter infection - also gene fragment(s) and protein(s) from Helicobacter urease gene cluster and heat shock protein(s).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                The urease UreB protein is a component of a novel immunogenic composition capable of inducing protective antibodies against Helicobacter infection. The composition may include the UreA protein (AAR74336, a ureaseassociated heat shock protein (AAR74340) or the Urel protein (AAR74340). The composition is used to prepare a vaccine for humans or animals, especially against H. pylori and H. felis. Antibodies against the proteins may be used for treating Helicobacter infection, and primers/probes to the DNA sequence may be used for detection of Helicobacter infection. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 26, Application US/08466248
; Patent No. 6258359
; GENERAL INFORMATION:
APPLICANT: Labigne, Agnes
APPLICANT: Sauerbaum, Sebastien
APPLICANT: Sauerbaum, Sebastien
APPLICANT: Thiberge, Jean-Michel
TITLE OF INVENTION: IMMUNOGENIC COMPOSITIONS AGAINST
TITLE OF INVENTION: COMPOSITIONS, POLYPEPTIDES FOR USE IN THE
TITLE OF INVENTION: COMPOSITIONS, AND NUCLEIC ACID SEQUENCES ENCODING SAID
TITLE OF INVENTION: POLYPEPTIDES
TITLE OF INVENTION: TOWNORTH SAID SEQUENCES ENCODING SAID

Patent No. 6551795

GENERAL INFORMATION:

APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: MUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO SEQUENCES

CURRENT PERERENCE: 107196.136

CURRENT FILING DATE: 1999-02-18

PRIOR PILING DATE: 1999-02-18

PRIOR PILING DATE: 1998-07-27

NUMBER OF SEQ ID NOS: 33142
